Assignment 1030 Feedback

Chase Blokker

1a — After the somewhat disproportionately lengthy history section, you start hitting upon why the 12c might be a good fit for its user base, but it ends rather abruptly. You were heading in the right direction, but didn't quite bring it home. This aspect needs more work. (**/**)

2a — You provide a good description of the 12c's design and functionality, including a nice introduction to RPN. You need, however, a deeper discussion of how these aspects correspond to what its user base expects. Are the first- and second-level function assignments well-chosen? Do the colors have meaning to its users? You start doing this with RPN; you want to carry that RPN discussion further, plus apply what you did there to the other aspects of the calculator. (**/**)

2c — You have a very good usability metric analysis of RPN, but nothing else. You need more of this for other aspects of the calculator, plus will want an overall perspective based on all of these aspects put together. (**|**)

4d — A degree of research definitely shows, but you did not list your sources (even informally within the text) and the existence of factual errors (e.g., the Apple][did *not* have a mouse nor a GUI) highlights why this is important. (**/**)

4e — You show only two commits, with the first one being on the 30th itself! There is definitely room for much improvement here. (**/**)

4f — Submitted on time, but somewhat unfinished. (**|**)
